

Using technology safely

- You should never ever leave a device under your pillow because it will get too hot and might catch fire.
- If you tell anybody your password they will hack your account so don't do it.
- If something pops up on your screen don't open it unless there's a parent nearby just in case something pops up and it's inappropriate.
- Never buy a game that's not your age because it might be too inappropriate for you so never ever do it.
- Never plan to meet somebody just in case they try to rob you or take you away from your family so don't do it.
- If you download something don't do it without parents' permission because it might not be for you.
